Application:

Gradus has supplied and fitted a comprehensive wall protection system throughout the new Victoria Wing at Royal Victoria Infirmary (RVI), helping to create a hygienic, safe and attractive environment for all users.

The wall protection system is designed to protect all areas of the hospital from impact and abrasion caused by wheeled and pedestrian traffic. It helps to prevent the build up of germs and bacteria in damaged surfaces, reduce ongoing repair and maintenance costs and improve the long-term appearance of the interior.

In addition Gradus also supplied Esplanade matting at the main atrium, helping to reduce tracked in dirt and moisture.

XT stair edgings were also installed on all of the hospital's stair cases to reduce the risk of slips and trips, in line with the guidelines BS8300:2009 and Approved Document M.
